SUN SCREEN SKINCARE

Prevention is the most effective way to avoid sun damage. Premature aging from UV exposure shows up as brown spots, wrinkles and sagging. Much of our sun exposure occurs in day-to-day activities like driving, walking and playing sports. That's why it's important to use a daily moisturizer with at least SPF 15 sunscreen, UVA and UVB protection.

The new NEOCUTIS skincare line from Switzerland has an aesthetically elegant finish alone or under makeup with collagen stimulating moisturizer, antioxidants and sunscreen – simple one-step. Perfect skin care with great protection from daily sun exposure.

For high sun exposure days, make sure to use a sunscreen with an SPF of at least 30 and frequently reapply. Physical sunscreens, those containing zinc and titanium, are a great option for those who are sensitive to chemical sunscreens, virtually every sunscreen sold in drug stores. The MDSOLAR Sunscreen line is a chemical free physical sunscreen with comprehensive UVA and UVB protection. It won't irritate your skin, leaves an aesthetically pleasing finish without white spots and protects against skin cancer and wrinkles, brown spots and skin sagging.

THE NEW VI-PEEL

A mid-depth chemical peel used on the face, neck, chest, hands and arms to improve skin color, acne and reveal fresh new skin.

Lights & Lasers

MOST OF US HAVE SOME SUN DAMAGE AND SKIN AGING THAT WE WOULD LIKE TO REVERSE.

LIGHT TREATMENTS AND LASERS ARE OPTIONS FOR TREATING THESE PROBLEMS.

Early pre-cancerous sun damage may be treated in-office by combining topical pharmaceuticals and light treatments called PHOTO-DYNAMIC THERAPY. Dr. Olson uses Levulan activated by INTENSE PULSED LIGHT (IPL) to destroy pre-cancerous cells. Levulan is wiped onto the face, chest or hands and is absorbed into the pre-cancerous cells over a 45minute period. The Levulan is then activated by a 15 minute IPL treatment. After treatment, you will need to avoid sun for and will have a light pink skin tone lasting a couple of days. One to 3 treatments will destroy pre-cancerous cells and reverse sun damage and brown spots giving you fresher healthier skin. The same therapy is effective against rosacea and adult onset acne.

For dramatic results and more advanced treatment of sun damage and wrinkles, Dr. Olson has the latest technology: the Total FX Fractionated CO2 Laser. She has over 15 years experience using CO2 lasers and has instructed other physicians in laser surgery and laser skin resurfacing for the past decade. She was awarded 2009 American Academy of Ophthalmology TEACHING AWARD for her work.

The TOTAL FX Fractionated CO2 Laser is a breakthrough in reversing the effects of sun damage as wrinkles, brown spots, sagging skin and aged skin texture. It is also the latest and best treatment for injury scars, acne scars and skin resurfacing. Post-treatment downtime has been reduced to about 5 days with a much more comfortable and tolerable recovery than the old CO2 treatments. The cost has also gone down, making full face resurfacing a great value.

NEW! Combination fillers for more comfortable treatments...

In addition to restoring the quality of your skin with a peel, with Photo-Dynamic Therapy or with Total FX Laser treatment, Dr. Olson can address sub-skin sagging, deflation and loss of volume associated with aging for a completely refreshed and youthful look. Fillers such as Juvederm, Restylane, Perlane, Sculptra and Radiesse offer perfect non-invasive injectable solutions to these issues. And now these fillers are combined with local anaesthetics for more pain-free treatment. Dr Olson was involved in early clinical trials and has lectured and published nationally on filler use in combination

with lasers, Botox and limited surgery to achieve the most natural restoration of youthful appearance. She has many years experience artfully using these products. Rediscover a more youthful

you by restoring your youthful contours and facial shape. This non-surgical facelift will never result in the tight or pulled look of a surgical face lift.

Latisse

Latisse: the new prescription drop that is placed along the lash line each morning resulting in longer and thicker lashes.
